Little Boy Blue

Bubblegum Pink

Mellow Yellow

Riding Hood Red

DERIVAN

chalkboard paint

250ml
jars

Added to the original Derivan Chalkboard Jet Black and Deep Green range now we have six additional brilliant colour options. Available in 250ml jars, Derivan Chalkboard Paint adds a bright fun finish to the traditional and practical uses of chalk notation, doodling and art.

Use

The new Derivan Chalkboard Paint comes in two traditional colours and six bright new colours. The new colours have all the qualities of traditional blackboard paint, the only difference is the new colour choice available. Tangy Orange, Dinosaur Green, Little Boy Blue, Bubblegum Pink, Mellow Yellow and Riding Hood Red.

Derivan Chalkboard Paint is an easy to apply, water-based, quality blackboard paint that converts wood, metal or most other surfaces into a blackboard/chalkboard. It is also perfect for giving existing blackboards a new lease of life.

Derivan Chalkboard paint contains no harmful solvents and is suitable for use all around the home. It can be especially useful for artistically-minded infants who find textas and furniture an attractive combination!

Preparation

Derivan Chalkboard Paint works on any surface that would normally be suitable for water-based acrylics including glass, plastic and wood. All surfaces must be dust-free and clean. If any cracks are present, ensure they are filled and sanded. The smoother the surface, the smoother your chalkboard will be. Although most surfaces will not require priming, if you do use a primer, see the Surface Preparation page in the Techniques section of our website at www.derivan.com.au for detailed instructions.

Application

This product can be applied with a dry soft bristled or foam brush. Although the consistency of the product is thick, be sure to apply thin coats to avoid excessive

brush marks. If a very smooth surface is required the use of a foam paint roller is recommended. Two to three coats are recommended for complete, opaque coverage. Allow paint to dry at least 8 hours between coats for optimal coverage and durability. Be sure to wait at least 48 hours before using chalk on the surface to ensure the product is thoroughly dry. This product is not suitable for mixing with Derivan mediums as its chalkboard qualities may be compromised.

Finish

The final finish will be matte with a slightly gritty textured surface. This is due to the nature of the product.

Clean Up

Clean all brushes and spills in warm soapy water.

Surface Cleaning

A light rub with a damp cloth is recommended to clean the surface and remove any chalk, and also minimises the amount of loose chalk dust.

Avoid saturating or scrubbing the surface with water regularly as overwashing can compromise the chalkboard finish.

A traditional blackboard eraser is not effective for use with this product.
